key requested from a sequencer before creation
• key: pool key P_j of a live epoch
• holders: t-of-n committee drawn by lottery from permissionless operators
• decrypt: committee, after the grace window
• publish: any sequencer (requestResultsDecryption, finalizeResultsFromDKG)
• key: P_j + pk_{org}
• holders: committee and organizer
• decrypt: committee, only after the organizer reveals sk_{org}
• publish: any sequencer, as above
• key: ceremony key, shared by the processes bound to the ceremony
• holders: t-of-n invited members
• decrypt: members, once the ceremony's decryption gate opens
• publish: any sequencer, as above
• key: sk derived from the sequencer's master secret and processID
• holder: that sequencer alone
• decrypt: the sequencer, after the grace window
• publish: the sequencer (results program, setProcessResults)
