prover
Ethereum (L1)
L1Block (OP)
process registry (OP)
L1BlobVerifier (OP)
seal batch; build blobs and KZG commitments
batch inputs
blob tx 1: blobs 0-5
tx 1 mined in block B_1
blob tx 2: blobs 6-11
tx 2 mined in block B_2
batch proof (ok = 1)
wait until the L1 origin reaches B_2
headers origin..B_1; trie proofs
submitStateTransitionL1(…, L1 proof)
verify(L1 proof)
hash(), number()
headers chain to the origin or a recorded block; MPT proofs; age ≤ 7200 blocks
versioned hashes, blocks
ZiskVerifier; point evaluation per blob; new root; events
